Bucharest, Studii si Cercetari de Inframicrobiologie, Vol 14, No 5, 1963, pp 551-563.

Abstract [Authors' English summary modified]: Positive micro-agglutination reactions for rickettsial or pararickettsial germs were obtained in 80% of the serological tests on 100 patients suffering from rheumatic arthrosis processes. The germs were also isolated in white mice and chick embryos for some of the patients. Therapy with tetracyclin group antibiotics resulted in marked improvements. The actual role of rickettsia or pararickettsia as causal agents or as factors reactivating a different pathologic process is still not clear.

TITLE: A new pH indicator

PERIODICAL: Referativnyj zhurnal. Khimiya, no. 15, 1962, 117, abstract
1503 (Nauchn. yezhegodnik. Odessk. un-t. Khim. fak. no.2.
Odessa, 1961, 72 - 74)

TEXT: A new azo compound having the properties of a pH indicator has been obtained. Its color is violet in an acid, red in a neutral and orange in an alkaline medium, and the color change interval lies within the range pH 6.2-7.6. This azo compound is obtained by diazotizing 2-naphthylamine-1-sulfoacid by adding NaNO_2 in the presence of H_2SO_4 and ice. The diazo compound, which is bright yellow, is added to a solution of Mg salt of 1-naphthylamine-8-sulfoacid. The resulting bright violet residue is neutralized with a solution of NaOH to give a weakly alkaline reaction, marked by its changing to bright orange, and is then filtered and dried. The reaction which produces this new azo compound 4-(1-sulfo-2-naphthylazo)-1-naphthylamine-8-sulfoacid can also be used for determination of nitrites. ✓

"The Ability of Choice Sequence to Affect opinions as Expressed in
Questionnaires"

Budapest, Magyar Pszichologial Szemle, Vol 23, No 1-2, 1966, pp 38-50.

Abstract: The Hungarian Radio and Television conducted a public opinion survey through questionnaires during 1964. A total of 2367 recipients out of 3000 responded. The responses were analyzed. The salient features of the questions and the distribution of the responses were briefly described. It was noted that the sequence of choices in multiple-choice questions affected the responses. This was verified by incorporating the same choices in various sequences in essentially the same questions. In questions where the 'yes' answer represents a positive attitude the most positive choice will be favored excessively if mentioned first, and vice versa. The significance of this observation in formulating questionnaires and in the analysis of questionnaire responses was discussed. No references.

35. Device for reducing the petrol consumption of
automobile engines - Kiszűkítő esztétizátorok benzín-
fogyasztáshoz - E. Szűcsányi (Hungarian
Ingenyártású esztétizátor) - Magyar Technika Vol. 1953. No. 14
pp. 733-735. 4 figs.)

It is incorrect to reduce fuel consumption by switching off the engine during driving, many accidents are due to this practice. It is equally improper to reduce the jet diameter excessively since the breaking of the engine due to the lean mixture system is not far. There are two correct methods of reducing fuel consumption, cutting off the fuel supply during forced tilting (e.g. in descent or in coming down) and reducing the fuel supply with partial loads. The device makes use of both methods in the following manner: a solenoid with two circuits is fitted to the carburettor. A jet needle mounted on the extension of the second plunger is forced completely into the jet when one of the circuits is made and only partially when the other is made thereby cutting off and throttling the fuel supply respectively. The device may be fitted to any carburettor and up to 35% savings in fuel may be attained by its application.

Sweet-white-clover and Sudan-grass pastures. J. SURANYI (Veternahrungs, 1952, L 104-110). For autumn sown (late Aug. and early Sept.) pastures the main species should include winter barley and rye, crimson clover, and sweet white clover (*Melilotus albus*); for spring sowing (late March and early April), Sudan grass and sweet white clover are recommended. Such pasture can be grazed from about mid-June until the end of the season. Sweet Sudan grass, unlike ordinary Sudan grass, proved particularly palatable to grazing cattle.

✓ Surányi, János. Sur la structure des classes finies d'ensembles. Comptes Rendus du Premier Congrès des Mathématiciens Hongrois, 27 Août-2 Septembre 1950, pp. 401-407. Akadémiai Kiadó, Budapest, 1952. (Hungarian. Russian and French summaries)

If F is a subset of a set E , write $F^1 = F$ and $F^{-1} = E - F$. If E_j and F_j are subsets of E , $j = 1, \dots, n$, the class $\{E_1, \dots, E_n\}$ is defined to be equivalent to the class $\{F_1, \dots, F_n\}$ if and only if there is a permutation π of the first n positive integers such that $\bigcap_{j=1}^n E_j$ and $\bigcap_{j=1}^n F_{\pi(j)}$ are empty and non-empty at the same time, for all sequences $\{\epsilon_1, \dots, \epsilon_n\}$ with $\epsilon_j = \pm 1$, $j = 1, \dots, n$. Let $N(n)$ be the number of equivalence classes of classes consisting of not more than n sets. The author proves that $n!N(n)/2^n \rightarrow 1$ as $n \rightarrow \infty$.

Kuránsi, J., and Turán, P. Notes on interpolation. I.
On some interpolational properties of the ultraspherical
polynomials. Acta Math. Acad. Sci. Hungar. 6 (1955),

67-80. (Russian summary)

1 - F/W

HS

The authors are concerned with interpolation polynomials $f(x)$ arising from data which involve non-consecutive derivatives. In particular, the problem $f(x_i) = y_i$, $f''(x_i) = y_i''$ ($i = 1, 2, \dots, n$) is considered. Assuming that n is odd and the x_i are symmetrically located in $[-1, 1]$, there is in general no polynomial $f(x)$ of degree $2n-1$ satisfying the conditions. Moreover, if there is such a polynomial, there are infinitely many of them. In the further course of the paper the x_i are chosen as the zeros of certain ultraspherical polynomials $P_n^{(0)}(x)$. Let n be even and let the x_i be the zeros of $(1-x^2)P_{n-1}^{(0)}(x)$. Then the interpolation polynomial $f(x)$ of degree $2n-1$ is always unique. However, the following is true: Let x_i be the zeros of $P_n^{(0)}(x)$, $\lambda + \frac{1}{2}$ even integer > 0 , $n \geq \lambda + 5/2$; there exist polynomials $f(v) \neq 0$ of degree $n + \lambda + \frac{1}{2}$ such that $f(x_i) = f'(x_i) = 0$.

Title : On the Decay of Positive K Mesons

Orig Pub : Acta phys. Acad. scient. hung., 1958, 8, No 4, 447-449

Abstract : Starting with the hypothesis of parity doublets, strong
 \bar{K} interaction, and the assumption that the decay of
the π^+ mesons proceeds via ω^+ decay, the author cal-
culates the branching ratios of π^+ decays to that of
 η^+ decay, and also the $K_{\mu_3} \rightarrow K_{\mu_2}$ decay
branching ratio. By comparing the results a value of
1/14 is obtained for the dimensionless constant of
strong \bar{K} interaction. -- S.G. Matinyan

The changes in the precipitation zone of casein in the presence of various drugs, chiefly chemotherapeutics. Sándor, Sutányi and László, Kreativus (1 my., Debrecen, Hung.), *Kisből. Orvostudomány*, 2, 344 (1930).—Derivs. of salicylic acid, org. Accomp., and the newer chemotherapeutics and antibiotics, such as sulfonamides, penicillin and streptomycin, showed no significant effects on the isoelectric point of casein, proving that their bacteriostatic action is independent of their colloid-chem. behavior. This colloid-chem. inactivity may partly explain the relatively low toxicity of these antibiotics and sulfonamides. Among the basic monomer dyes phenylazodiaminopyridine (Vestin) shifted the max. flocculation point of casein to higher pH values in a 0.001 M concn., but more dil. solns. were without effect. *p*-Ethoxy-2,4-diaminobenzeno-HCl (Cystural) showed similar effects even at a concn. of 0.00002 M. Phenolphthalein and rubrophen (trimethoxydihydroxytritane) did not influence the isoelec. point of casein. Among the acridine dyes tryppavline (3,6-diamino-10-methylacridine HCl salt), rivanol (2-ethoxy-6,9-diaminoacridine lactate), atebim, and Acridine Orange (3,6-dimethyl-2,7-diamino-9-phenylacridine) shifted the pptn.

zone to the basic region. It is interesting to note that the limiting concns. for pptn. with tryppavline and rivanol are the same as the concns. which must be reached when using these drugs therapeutically, namely, 0.0001 and 0.0002 M. Chrysarobin (methylhydroxanthranol) showed no effects in concns. of 0.001 and 0.00002 M, resp. Yatren (iodohydroxyquinolinesulfonic acid) at concns. of 0.001 and 0.0001 M shifted the pptn. zone to the acid region. Novatophan (Me 2-phenylquinoline-4-carboxylate) was ineffective. Quinine-HCl and optoquine (ethylhydrocuprime) in concns. of 0.001 M shifted the pptn. zone to the basic region but were ineffective in higher dilns. Eucupine (mammyhydrocuprime) showed similar effects even at a concn. of 0.0001 M. Neosalvarsan shifted pptn. zone to the acid region even in a concn. of 0.00002 M, whereas atoxyl and mapharsen were ineffective. Among 9 sulfonamides investigated only sul. Frontosil showed effects, shifting the pptn. zone to the acid region at a concn. of 0.00002 M. Definite correlation was proved between chemotherapeutic and colloid-chem. effects in some cases (tryppavline, rivanol, quinine, optoquine, and eucupine). István Finály

The influence of sex hormones on the human blood sugar level Z. GEBURTSH. GYNAK. 1955, 144/1 (69-75) Tables 5

The influence of sex hormones on the fasting blood sugar level was investigated in female and male patients (without hormonal disturbances). The greatest fall in the blood sugar value was produced by stilboestrol, a slightly smaller decrease by oestrone and the smallest by testosterone. Progesterone gave rise to highly irregular blood sugar curves. In functional disturbances of the liver (cirrhosis) the stimulating effect of oestrone was absent. Koref - Budapest (III, 10*)
